

Logical Connections by IPS Deployment Option

- Color Legend:**
- █ Legacy Application
 - █ IPS Transport
 - █ Legacy Transport
 - █ IPS E2E Security
 - █ Ground-Ground Security
 - █ Air-Ground Link Security

Dotted line = For some datalinks (e.g., VDLm2), A-G link security may be hosted in the Airborne IPS System rather than in the airborne radio when modifications to the existing radio may be too complex or cost prohibitive.

Although not shown, the Access Network Provider may provide ground-ground security, e.g., VPN between the Inmarsat AERO Rack and a ground entity (mobility service provider, gateway, end entity).
