

**Functional Block 1 – Data Collection**  
Collect the required data sets from the aircraft data sources and store it in preparation for transporting it off the aircraft.

**Functional Block 2 – Initiate Data Transport**  
Detect a condition to start transporting data off the aircraft via transmission or deployment of storage module

**Functional Block 3 – Data Transport**  
Move the collected data off the aircraft so that it can be recovered without the need to access the aircraft wreckage.

**Functional Block 4 – Off-Aircraft Storage**  
Store the data after it has been transported off the aircraft with the required access restrictions.

**Functional Block 5 – Data Recovery**  
Retrieve the data from the off-aircraft storage location and make it available to the users.

**Functional Block 6\* – Locate end of Flight**  
Optionally a TFRD solution can provide localization information for the end of flight.
